

The Toigo Scale embedded is a modern and innovative product that seeks to improve transport and cargo management system. Available for bus and tractor trailers with mechanical suspension and air.

The scale has wireless technology, which lets you view and monitor in real time and in a practical and efficient way the total weight of the axles and net charge of the vehicle, the display in the cab, or the vehicle anywhere as long as the Scale is integrated customer tracking system.

BENEFITS

- Increased productivity due to gain time;
- Extends the profitability of freight;
- Overcharge control, avoiding fines for axle and total;
- Helps prevent load rearrangement;
- Provides weight measurement in remote places;
- Avoids cost shifting and the use of third-party balance;
- Monitoring the weight of the fleet since the integrated tracking system;
- Monitoring your source load weight to the final destination;
- Small margin of error of 1% to 5%;
- Elimination of overload, which generates high maintenance costs and repairs.
